

Summary:

I'm dedicated, hardworking self-taught frontend developer following my passion for great design and code.

Areas of expertise:

(Includes technical skills, other professional skills, personal strengths)

- | | | |
|-----------------------------|----------------------|-----------------------|
| ▪ HTML5 | ▪ CSS3 | ▪ SASS |
| ▪ JavaScript | ▪ Dart & Flutter | ▪ WordPress |
| ▪ ReactJS | ▪ NextJS | ▪ Jest & Enzyme |
| ▪ Redux | ▪ Webpack | ▪ Parcel |
| ▪ TypeScript | ▪ Firebase | ▪ PostgreSQL |
| ▪ Ability to work on my own | ▪ Great communicator | ▪ Good eye for design |

Software Jobs:

EazyFood – Freelance/ Side Project (80% complete)

Project Details**Overview**

- An e-commerce solution for users to buy food items from the comfort of their devices
- Made use of HTML5, CSS3, SASS and JavaScript for the development of the frontend.
- Made use of Firebase as the backend so the users could create accounts, login, add food items to favorites, implement an efficient CRUD functionality in the shopping cart.

Challenges

- Designing a unique look for the shop and product cards.
- Implementing the shopping functionality efficiently following the MVC pattern in Vanilla JS and the localStorage API to maintain certain aspects on the state.
- Utilizing the history API, to create an SPA experience when users click on a product to see its details in a popup. This is also important because users can bookmark their favorite products in the browser and come back to access it in without me having to create an additional page for the brief details on each product.
- Building a custom category toggler that sorts the products.
- Building a mobile experience that doesn't reduce or take away that wow factor from the web app.

EazyRent – Freelance/ Side Project (65% complete)

Project Details**Overview**

- A project built for tenants or home seekers looking to lease a home on a monthly or yearly basis
- Made use of HTML5, CSS3, ReactJS, NextJS for the development of the frontend.
- Made use of JSON-Server as the temporary server so the users could create and delete listings, add banks for payments, view and edit the banks etc.

Challenges

- Developing a clean and simplistic UI for users.
- Porting the app from being rendered on the client side to a NextJS server-rendered app
- Building custom components for my personal UI library and integrating them into the project. Examples are the Image Picker, Image Gallery, Toggler component which I had built during a previous project (EazyFood) but remodeled etc.

YOUtv - Freelance/ Side Project (60% complete)

Project Details

Overview

- A mobile app built using Flutter, Google's mobile SDK which would provide cool movies for users to watch.
- Made use of Flutter for the development.
- Access to cool movie trailers on each movie's detail page.
- Dark mode feature
- Made use of Firebase as the backend so the users could create accounts, login and fetch movies from the API which I had created myself and imported into Firebase.

Challenges

- Was my first experience building a mobile app but was able to create a unique experience for both Android and iOS users
- Quite expensive services to get premium movies and live stream into this app caused a stall on its progress.

NOTE: Some other exciting projects I just started and you'll find on my GitHub include my own React component library (RubyUI) which I'm hoping to share with the world in the nearest future and EazyBuy, an e-commerce web app for general purpose items.

Work Experience:

iDevice Integrated Services – 2016 till date

Front End Developer and App Developer

Responsibilities

- Translating mockups to code for new projects with using HTML, CSS and JavaScript.
- Learnt about using the WordPress CMS.
- Building quick scalable websites and solutions using mostly WordPress.
- Worked closely with the UI designers and had some experience using Sketch
- Managed previously built websites and building new web applications using ReactJS
- Learn and develop mobile applications using Google's mobile SDK, Flutter
- Onboard newer developers and slowly help them integrate into the company.
